

## INSTALLATION GUIDELINES

### **Water Chargers mod. ISU1**

Dimensions: 10.3x11.5 cm

Weight: 185 gr.

Thread in: M24 or 1/2"

Thread out: 1/2"

This model can be connected to the shower hose or under the sink. It is possible to mount it also on the faucet, in this case please unscrew the adaptor on top of the charger.

Indications: make sure the water is flowing in the direction indicated by the arrows.

To maximise the water charging, it is possible to assemble 2 water chargers, one after the other. In this case, please use one of the extensions to assure 2 inches of distance between the chargers.

### **Water Chargers mod. ISU4**

Dimensions: 11.7 cm

Weight: 260 gr.

Thread in: 1/2"

Thread out: 1/2"

This model can be connected to the shower hose, to the sink and it is handy to take it with you while travelling, too!

Indications: make sure the water is flowing in the direction indicated by the arrows.

To maximise the water charging, it is possible to assemble 2 water chargers, one after the other. In this case, please use one of the extensions to assure 2 inches of distance between the chargers.

### **Water Chargers mod. IMH45**

Dimensions: Length 160mm  $\varnothing$  45mm

Weight: 1220 gr.

IMH45 Water Charger is designed to serve a big house, a villa or a condo. This model is meant to be installed on the main water system of the house/building.

Indications: make sure the water is flowing in the direction indicated by the arrows.

**In order to preserve the functionality, it is required to mount a filter before the IMH45 Infinity Water Charger. The filter will block eventual dirt or other impurities, favouring a correct and prolonged use of the charger.**

Italy

We are made of water. And we constantly need water to live.

Water hydrates each cell we are made of. Water nurtures. Water brings information.

Water means life, but have we ever thought about what kind of water we normally use to sustain us? Besides its purity, that is normally assured in the tap water that runs in our houses, or in the bottles we buy from the shelf, we never think to water in terms of its qualitative aspects. Why do we feel good and regenerated when we stand by a stream or we drink directly from a spring? Because there is a quality in that water that is transferred to us.

We can measure this quality with the electrons that water brings. We know that free radicals in our body lack in electrons, so they steal them from the atoms of what our cells are built. Impoverished cells with the loss of these electrons may fall ill.

Water is an extraordinary way to replenish electrons in the body, helping eliminate free radicals and keep cell nurtured and alive.

In nature, before arriving to us out of the spring, water runs with turbulences through different layers of minerals, this is the way it comes out rich of electrons.

Our Infinity Water Chargers create the same turbulences and the same magnetic induction that charge water with electrons bringing us a high quality water directly into our houses.

## Suggested Uses:

- \* Drinking
- \* Cooking
- \* Bathing
- \* Mouth washing
- \* Sinus rinsing
- \* Hydrocolon
- \* Intimate hygiene
- \* Natural Remedies vehiculation
- \* Swimming pools: the use of an Infinity Water Charger in a pool reduces dramatically the need of chlorine and anti-algae products
- \* Gardening and agriculture
- \* Animal farming: field tests made in Italy showed an important decrease in the use of antibiotics, a better environment for the animals and a higher quality product for the consumers

## Pros:

- \* No electricity needed
- \* Water Chargers last 20 years
- \* They can be used together with any filtration system
- \* Easy to assemble
- \* Easy to take with you while traveling
